

Supplemental Figure 3. The proportion of contigs with complete protistan benchmarking universal single-copy orthologs (BUSCO) recovered in each assembly. Line plots on the left compare values between the DIB and the NCGR ‘nt’ assemblies. Gray lines represent values where NCGR was higher than DIB and green lines represent values where DIB was higher than NCGR. In the right split violin plots showing the distribution of scores for each, in the green (right side) are the “DIB” re-assemblies and in gray are the original assemblies from NCGR ‘nt’ assemblies.
